Dear Tooth Fairy,

st

# Hello Friends!

Losing a tooth is such a big deal for our students! I made this unit for my classroom to help my students celebrate this awesome milestone. Both my students and parents appreciate how special they feel when recognized for losing a tooth!

## Included in this pack:

teacher tips

parent letter

lost tooth binder printables

student lost tooth badges

student lost tooth labels

student tooth graph

monthly classroom lost tooth recording printable

Dear Tooth Fairy letter writing

certificates & tooth take home poem

cool teeth facts

tooth diagram (teacher model)

tooth diagram (student cut and paste)

color & ink  
saving B/W  
versions  
included

I hope your students enjoy it too! *Christina*

# Tips For the Teacher

copies all materials you will need at the beginning of the year so you have them at your fingertips

Prepare the binder, here is what works for me:

Insert cover

Direction page

Cool Teeth Facts/Diagram of a Tooth

Enough writing paper  
for students  
(hint: they may loose  
many teeth each)

## Dear Toothless Friend and Family,

Congratulations on the loss of your tooth, your classmates and I are so excited for you!  
If you wish please use this binder to write about your lost tooth. We will enjoy reading your memory throughout the year.

### In your story you can tell us:

- how it fell out
- how you felt when it happened
- what you did with your tooth after it fell out
- other traditions you may have after losing a tooth
- how many teeth you have lost

Enjoy reading other memories written by your friends and learning about teeth.

Please return the binder back to school in the next 2 days.

**HAVE FUN!**

# Tooth Facts

## Cool Teeth Facts

Check out these fun tooth facts for kids. Learn about different types of teeth, how many you have, what they do and much more.

- Humans form 2 sets of teeth over the course of their lives.
- The first set (sometimes called baby teeth) features 20 teeth.
- The second set (sometimes called adult teeth) features 32 teeth.
- Baby teeth are usually replaced by adult teeth between the ages of 6 and 12.
- Humans have a variety of teeth including molars, premolars, canines and incisors.
- Incisors help bite pieces from food.
- Canines help hold and tear food apart.
- Molars help grind food.
- Teeth are covered in a hard substance called enamel.
- Teeth are surrounded by gums.
- Cavities can damage a tooth if left untreated.
- Braces are often used to help straighten or align teeth.
- No two people have the same set of teeth—your teeth are as unique as your fingerprint, so be proud of your unique set of teeth.
- An average person spends 38.5 days brushing their teeth over their lifetime.
- Your mouth produces over 2.5,000 quarts of saliva in a lifetime—that's enough to fill two swimming pools. Saliva has many uses, including assisting you with your digestion and protects your teeth from bacteria in your mouth.
